***Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

***Allowable Subject Matter***

Claims 1-16 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to an apparatus for setting a battery alarm voltage for a mobile information terminal. Each independent claim identifies the uniquely distinct features "an alarm voltage detecting unit that detects a battery alarm voltage for alarming a voltage drop of the battery; a suspend voltage detecting unit that detects a suspend voltage at which the mobile information terminal enters a suspend state following the voltage drop of the battery; and a terminal communication unit that transmits the voltage of the battery detected to the battery management server, and the battery management server includes a voltage controller that automatically sets the battery alarm voltage based on the voltage of the battery detected; and a server communication unit that transmits the battery alarm voltage set to the mobile information terminal". The closest prior art, Hayes, Jr. (US 5,726,636) and Murphy (US 6,236,326) disclose conventional low battery alarm for mobile devices, either singularly or in combination, fail to anticipate the above limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art of Hayes, Jr. (US 5,726,636), Murphy (US 6,236,326), Koizumi (US 6,678,538) and Liebenow (US 6,459,896) are cited to show a variety of low battery alerting mobile devices.
